Curso JavaScript 6.0

Rafael Herrera García Octubre 2019

JavaScript and the DOM

MERKLE RKG

Tema 3

Document Object Model (DOM)

var theDiv = document.getElementsByTagName('div')[0];
var paragraph = theDiv.getElementById('some-id');

paragraph.id
paragraph.getAttribute('id');

</div>
paragraph.firstChild
paragraph.childNodes[0]

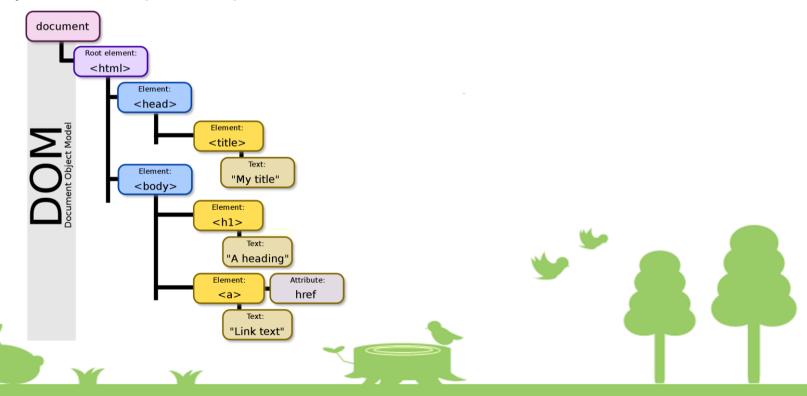

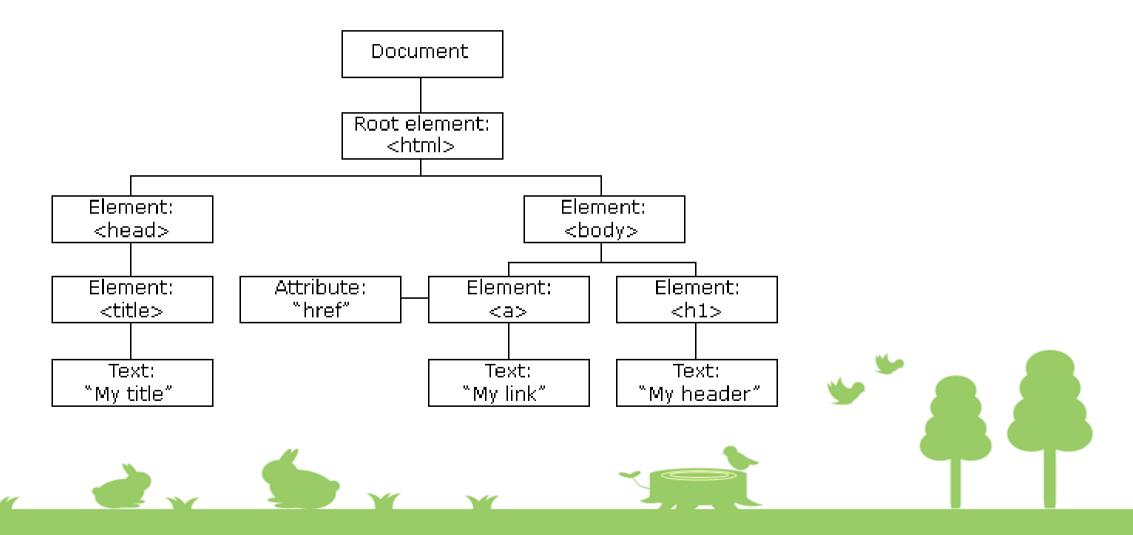

• DOM es un modelo que permite manipular mediante Javascript un documento de hipertexto (HTML).

- El W3C define como un estándar a DOM para acceder a un documento.
- El W3C separa en tres categorías
 - Core DOM
 - XML DOM
 - HTML DOM

HTML DOM define:

- A los elementos de un documento HTML como objetos
- Las propiedades de todos los elementos de un documento HTML
- Los métodos de acceso a todos los elementos HTML
- Los eventos de todos los elementos de un documento HTML.

- ¿Qué puedo hacer desde Javascript sobre un documento HTML?
 - Cambiar los elementos HTML
 - Modificar el estado de los atributos de los elementos HTML
 - Modificar los estilos (CSS) de elementos HTML
 - Eliminar elementos y atributos HTML
 - Agregar nuevos elementos HTML
 - Manejar los eventos que ocurren sobre elementos HTML
 - Agregar nuevos eventos y gestionarlos sobre elementos HTML

- DOM tiene métodos y propiedades que pueden ser manipulados desde Javascript.
- Cualquier elementos HTML de un documento se puede tratar como un objeto.
- Un método es una acción a realizar o ejecutarse.
- Una propiedad es un dato que puede ser recuperado (get) o modificado(set).

- Es el objeto al que pertenecen todos los elementos de un documento HTML.
- Desde este objeto se puede acceder a los elementos y sus propiedades que están en un documento HTML.

Method	Description
document.getElementById(id)	Find an element by element id
document.getElementsByTagName(name)	Find elements by tag name
document.getElementsByClassName(name)	Find elements by class name

Property	Description
element.innerHTML = new html content	Change the inner HTML of an element
element.innerText = new text content	Change the text of an element
element.attribute = new value	Change the attribute value of an HTML element
element.style.property = new style	Change the style of an HTML element
Method	Description
element.setAttribute(attribute, value)	Change the attribute value of an HTML element

Method	Description
document.createElement(element)	Create an HTML element
document.removeChild(<i>element</i>)	Remove an HTML element
document.appendChild(element)	Add an HTML element
document.replaceChild(new, old)	Replace an HTML element
document.write(text)	Write into the HTML output stream

Property	Description	DOM
document.anchors	Returns all <a> elements that have a name attribute	1
document.baseURI	Returns the absolute base URI of the document	3
document.body	Returns the <body> element</body>	1
document.cookie	Returns the document's cookie	1
document.doctype	Returns the document's doctype	3
document.documentElement	Returns the <html> element</html>	3
document.documentMode	Returns the mode used by the browser	3
document.documentURI	Returns the URI of the document	3
document.domain	Returns the domain name of the document server	1
document.embeds	Returns all <embed/> elements	3
document.forms	Returns all <form> elements</form>	1
document.head	Returns the <head> element</head>	3
document.images	Returns all elements	1

Property	Description	DOM
document.images	Returns all elements	1
document.implementation	Returns the DOM implementation	3
document.inputEncoding	Returns the document's encoding (character set)	3
document.lastModified	Returns the date and time the document was updated	3
document.links	Returns all <area/> and <a> elements that have a href attribute	1
document.readyState	Returns the (loading) status of the document	3
document.referrer	Returns the URI of the referrer (the linking document)	1
document.scripts	Returns all <script> elements</td><td>3</td></tr><tr><td>document.strictErrorChecking</td><td>Returns if error checking is enforced</td><td>3</td></tr><tr><td>document.title</td><td>Returns the <title> element</td><td>1</td></tr><tr><td>document.URL</td><td>Returns the complete URL of the document</td><td>1</td></tr></tbody></table></script>	

Method	Description
addEventListener()	Attaches an event handler to the document
adoptNode()	Adopts a node from another document
close()	Closes the output stream previously opened with document.open()
<pre>createAttribute()</pre>	Creates an attribute node
<pre>createComment()</pre>	Creates a Comment node with the specified text
<u>createDocumentFragment()</u>	Creates an empty DocumentFragment node
<pre>createElement()</pre>	Creates an Element node
<pre>createEvent()</pre>	Creates a new event
<pre>createTextNode()</pre>	Creates a Text node
execCommand()	Invokes the specified clipboard operation on the element currently having focus.
fullscreenEnabled()	Returns a Boolean value indicating whether the document can be viewed in fullscreen mode

Method	Description
getElementById()	Returns the element that has the ID attribute with the specified value
getElementsByClassName()	Returns a NodeList containing all elements with the specified class name
getElementsByName()	Returns a NodeList containing all elements with a specified name
getElementsByTagName()	Returns a NodeList containing all elements with the specified tag name
hasFocus()	Returns a Boolean value indicating whether the document has focus
importNode()	Imports a node from another document
normalize()	Removes empty Text nodes, and joins adjacent nodes
normalizeDocument()	Removes empty Text nodes, and joins adjacent nodes
open()	Opens an HTML output stream to collect output from document.write()
querySelector()	Returns the first element that matches a specified CSS selector(s) in the document
querySelectorAll()	Returns a static NodeList containing all elements that matches a specified CSS selector(s) in the document
removeEventListener()	Removes an event handler from the document (that has been attached with the addEventListener() method)
renameNode()	Renames the specified node
write()	Writes HTML expressions or JavaScript code to a document
writeln()	Same as write(), but adds a newline character after each statement

• Cualquier etiqueta HTML es un elemento que puede ser manipulado.

Property / Method	Description
<u>accessKey</u>	Sets or returns the accesskey attribute of an element
addEventListener()	Attaches an event handler to the specified element
appendChild()	Adds a new child node, to an element, as the last child node
attributes	Returns a NamedNodeMap of an element's attributes
blur()	Removes focus from an element
childElementCount	Returns the number of child elements an element has
<u>childNodes</u>	Returns a collection of an element's child nodes (including text and comment nodes)
<u>children</u>	Returns a collection of an element's child element (excluding text and comment nodes)
classList	Returns the class name(s) of an element
<u>className</u>	Sets or returns the value of the class attribute of an element

Property / Method	Description
click()	Simulates a mouse-click on an element
<u>clientHeight</u>	Returns the height of an element, including padding
clientLeft	Returns the width of the left border of an element
<u>clientTop</u>	Returns the width of the top border of an element
<u>clientWidth</u>	Returns the width of an element, including padding
<u>cloneNode()</u>	Clones an element
compareDocumentPosition()	Compares the document position of two elements
contains()	Returns true if a node is a descendant of a node, otherwise false
contentEditable	Sets or returns whether the content of an element is editable or not
dir	Sets or returns the value of the dir attribute of an element

Property / Method	Description
exitFullscreen()	Cancels an element in fullscreen mode
firstChild	Returns the first child node of an element
firstElementChild	Returns the first child element of an element
focus()	Gives focus to an element
getAttribute()	Returns the specified attribute value of an element node
getAttributeNode()	Returns the specified attribute node
getBoundingClientRect()	Returns the size of an element and its position relative to the viewport
getElementsByClassName()	Returns a collection of all child elements with the specified class name
getElementsByTagName()	Returns a collection of all child elements with the specified tag name
hasAttribute()	Returns true if an element has the specified attribute, otherwise false

Property / Method	Description
hasChildNodes()	Returns true if an element has any child nodes, otherwise false
<u>id</u>	Sets or returns the value of the id attribute of an element
innerHTML	Sets or returns the content of an element
innerText	Sets or returns the text content of a node and its descendants
insertAdjacentElement()	Inserts a HTML element at the specified position relative to the current element
insertAdjacentHTML()	Inserts a HTML formatted text at the specified position relative to the current element
insertAdjacentText()	Inserts text into the specified position relative to the current element
insertBefore()	Inserts a new child node before a specified, existing, child node
<u>isContentEditable</u>	Returns true if the content of an element is editable, otherwise false
isDefaultNamespace()	Returns true if a specified namespaceURI is the default, otherwise false

Property / Method	Description
isEqualNode()	Checks if two elements are equal
isSameNode()	Checks if two elements are the same node
isSupported()	Returns true if a specified feature is supported on the element
lang	Sets or returns the value of the lang attribute of an element
lastChild	Returns the last child node of an element
<u>lastElementChild</u>	Returns the last child element of an element
namespaceURI	Returns the namespace URI of an element
nextSibling	Returns the next node at the same node tree level
nextElementSibling	Returns the next element at the same node tree level
<u>nodeName</u>	Returns the name of a node
<u>nodeType</u>	Returns the node type of a node
nodeValue	Sets or returns the value of a node
normalize()	Joins adjacent text nodes and removes empty text nodes in an element

Property / Method	Description
<u>offsetHeight</u>	Returns the height of an element, including padding, border and scrollbar
<u>offsetWidth</u>	Returns the width of an element, including padding, border and scrollbar
<u>offsetLeft</u>	Returns the horizontal offset position of an element
<u>offsetParent</u>	Returns the offset container of an element
<u>offsetTop</u>	Returns the vertical offset position of an element
<u>outerHTML</u>	Sets or returns the content of an element (including the start tag and the end tag)
<u>outerText</u>	Sets or returns the outer text content of a node and its descendants
<u>ownerDocument</u>	Returns the root element (document object) for an element
<u>parentNode</u>	Returns the parent node of an element
<u>parentElement</u>	Returns the parent element node of an element
previousSibling	Returns the previous node at the same node tree level
previousElementSibling	Returns the previous element at the same node tree level
querySelector()	Returns the first child element that matches a specified CSS selector(s) of an element
querySelectorAll()	Returns all child elements that matches a specified CSS selector(s) of an element
remove()	Removes the element from the DOM

Property / Method	Description
removeAttribute()	Removes a specified attribute from an element
removeAttributeNode()	Removes a specified attribute node, and returns the removed node
removeChild()	Removes a child node from an element
removeEventListener()	Removes an event handler that has been attached with the addEventListener() method
replaceChild()	Replaces a child node in an element
requestFullscreen()	Shows an element in fullscreen mode
scrollHeight	Returns the entire height of an element, including padding
scrollIntoView()	Scrolls the specified element into the visible area of the browser window
scrollLeft	Sets or returns the number of pixels an element's content is scrolled horizontally
<u>scrollTop</u>	Sets or returns the number of pixels an element's content is scrolled vertically

Property / Method	Description
scrollWidth	Returns the entire width of an element, including padding
setAttribute()	Sets or changes the specified attribute, to the specified value
setAttributeNode()	Sets or changes the specified attribute node
<u>style</u>	Sets or returns the value of the style attribute of an element
tablndex	Sets or returns the value of the tabindex attribute of an element
<u>tagName</u>	Returns the tag name of an element
<u>textContent</u>	Sets or returns the textual content of a node and its descendants
<u>title</u>	Sets or returns the value of the title attribute of an element
toString()	Converts an element to a string

Event	Description	Belongs To
<u>abort</u>	The event occurs when the loading of a media is aborted	<u>UiEvent</u> , <u>Event</u>
	The event occurs when a page has started printing, or if the print dialogue box has been closed	<u>Event</u>
animationend	The event occurs when a CSS animation has completed	AnimationEvent
animationiteration	The event occurs when a CSS animation is repeated	AnimationEvent
animationstart	The event occurs when a CSS animation has started	AnimationEvent
beforeprint	The event occurs when a page is about to be printed	<u>Event</u>
beforeunload	The event occurs before the document is about to be unloaded	<u>UiEvent</u> , <u>Event</u>
<u>blur</u>	The event occurs when an element loses focus	<u>FocusEvent</u>
	The event occurs when the browser can start playing the media (when it has buffered enough to begin)	<u>Event</u>
	The event occurs when the browser can play through the media without stopping for buffering	<u>Event</u>

Event	Description	Belongs To
<u>change</u>	The event occurs when the content of a form element, the selection, or the checked state have changed (for <input/> , <select>, and <textarea>)</td><td><u>Event</u></td></tr><tr><td>click</td><td>The event occurs when the user clicks on an element</td><td>MouseEvent</td></tr><tr><td>contextmenu</td><td>The event occurs when the user right-clicks on an element to open a context menu</td><td>MouseEvent</td></tr><tr><td>сору</td><td>The event occurs when the user copies the content of an element</td><td><u>ClipboardEvent</u></td></tr><tr><td>cut</td><td>The event occurs when the user cuts the content of an element</td><td>ClipboardEvent</td></tr><tr><td>dblclick</td><td>The event occurs when the user double-clicks on an element</td><td>MouseEvent</td></tr><tr><td>drag</td><td>The event occurs when an element is being dragged</td><td><u>DragEvent</u></td></tr><tr><td>dragend</td><td>The event occurs when the user has finished dragging an element</td><td><u>DragEvent</u></td></tr><tr><td>dragenter</td><td>The event occurs when the dragged element enters the drop target</td><td><u>DragEvent</u></td></tr><tr><td>dragleave</td><td>The event occurs when the dragged element leaves the drop target</td><td><u>DragEvent</u></td></tr><tr><td>dragover</td><td>The event occurs when the dragged element is over the drop target</td><td><u>DragEvent</u></td></tr></tbody></table></textarea></select>	

Event	Description	Belongs To
<u>dragstart</u>	The event occurs when the user starts to drag an element	<u>DragEvent</u>
drop	The event occurs when the dragged element is dropped on the drop target	DragEvent
<u>durationchange</u>	The event occurs when the duration of the media is changed	<u>Event</u>
<u>ended</u>	The event occurs when the media has reach the end (useful for messages like "thanks for listening")	<u>Event</u>
error	The event occurs when an error occurs while loading an external file	<u>ProgressEvent, UiEvent, Eve</u> <u>nt</u>
focus	The event occurs when an element gets focus	<u>FocusEvent</u>
focusin	The event occurs when an element is about to get focus	<u>FocusEvent</u>
focusout	The event occurs when an element is about to lose focus	<u>FocusEvent</u>
<u>fullscreenchange</u>	The event occurs when an element is displayed in fullscreen mode	<u>Event</u>
fullscreenerror	The event occurs when an element can not be displayed in fullscreen mode	<u>Event</u>

Event	Description	Belongs To
<u>hashchange</u>	The event occurs when there has been changes to the anchor part of a URL	<u>HashChangeEvent</u>
input	The event occurs when an element gets user input	InputEvent, Event
invalid	The event occurs when an element is invalid	<u>Event</u>
<u>keydown</u>	The event occurs when the user is pressing a key	<u>KeyboardEvent</u>
<u>keypress</u>	The event occurs when the user presses a key	<u>KeyboardEvent</u>
<u>keyup</u>	The event occurs when the user releases a key	<u>KeyboardEvent</u>
<u>load</u>	The event occurs when an object has loaded	<u>UiEvent</u> , <u>Event</u>
<u>loadeddata</u>	The event occurs when media data is loaded	<u>Event</u>
<u>loadedmetadata</u>	The event occurs when meta data (like dimensions and duration) are loaded	<u>Event</u>
<u>loadstart</u>	The event occurs when the browser starts looking for the specified media	<u>ProgressEvent</u>
NA.		

Event	Description	Belongs To
<u>message</u>	The event occurs when a message is received through the event source	<u>Event</u>
mousedown	The event occurs when the user presses a mouse button over an element	MouseEvent
mouseenter	The event occurs when the pointer is moved onto an element	MouseEvent
mouseleave	The event occurs when the pointer is moved out of an element	MouseEvent
<u>mousemove</u>	The event occurs when the pointer is moving while it is over an element	MouseEvent
mouseover	The event occurs when the pointer is moved onto an element, or onto one of its children	MouseEvent
mouseout	The event occurs when a user moves the mouse pointer out of an element, or out of one of its children	MouseEvent
mouseup	The event occurs when a user releases a mouse button over an element	MouseEvent

Event	Description	Belongs To
<u>offline</u>	The event occurs when the browser starts to work offline	<u>Event</u>
<u>online</u>	The event occurs when the browser starts to work online	<u>Event</u>
<u>open</u>	The event occurs when a connection with the event source is opened	<u>Event</u>
<u>pagehide</u>	The event occurs when the user navigates away from a webpage	<u>PageTransitionEvent</u>
pageshow	The event occurs when the user navigates to a webpage	<u>PageTransitionEvent</u>
<u>paste</u>	The event occurs when the user pastes some content in an element	ClipboardEvent
<u>pause</u>	The event occurs when the media is paused either by the user or programmatically	<u>Event</u>
play	The event occurs when the media has been started or is no longer paused	<u>Event</u>
playing	The event occurs when the media is playing after having been paused or stopped for buffering	<u>Event</u>
<u>progress</u>	The event occurs when the browser is in the process of getting the media data (downloading the media)	<u>Event</u>
<u>ratechange</u>	The event occurs when the playing speed of the media is changed	<u>Event</u>

resize	The event occurs when the document view is resized	<u>UiEvent</u> , <u>Event</u>
<u>reset</u>	The event occurs when a form is reset	<u>Event</u>
scroll	The event occurs when an element's scrollbar is being scrolled	<u>UiEvent</u> , <u>Event</u>
search	The event occurs when the user writes something in a search field (for <input="search">)</input="search">	<u>Event</u>
<u>seeked</u>	The event occurs when the user is finished moving/skipping to a new position in the media	<u>Event</u>
seeking	The event occurs when the user starts moving/skipping to a new position in the media	<u>Event</u>
select	The event occurs after the user selects some text (for <input/> and <textarea>)</td><td><u>UiEvent</u>, <u>Event</u></td></tr><tr><td>show</td><td>The event occurs when a <menu> element is shown as a context menu</td><td><u>Event</u></td></tr><tr><td><u>stalled</u></td><td>The event occurs when the browser is trying to get media data, but data is not available</td><td><u>Event</u></td></tr><tr><td>submit</td><td>The event occurs when a form is submitted</td><td><u>Event</u></td></tr><tr><td>suspend</td><td>The event occurs when the browser is intentionally not getting media data</td><td><u>Event</u></td></tr><tr><td></td><td></td><td></td></tr></tbody></table></textarea>	

timeupdate The event occurs when the playing position has changed (like when the user fast forwards to a different point in the media) toggle The event occurs when the user opens or closes the <details> element touchcancel The event occurs when the touch is interrupted TouchEvent touchend The event occurs when a finger is removed from a touch screen TouchEvent touchmove The event occurs when a finger is dragged across the screen TouchEvent touchstart The event occurs when a finger is placed on a touch screen TouchEvent transitionend The event occurs when a CSS transition has completed TransitionEvent unload The event occurs once a page has unloaded (for <body>) UiEvent, Event volumechange The event occurs when the volume of the media has changed (includes setting the volume to "mute") waiting The event occurs when the media has paused but is expected to resume (like when the media pauses to buffer more data) Wheel The event occurs when the mouse wheel rolls up or down over an element</body></details>			
touchcancel touchend The event occurs when the touch is interrupted TouchEvent The event occurs when a finger is removed from a touch screen TouchEvent The event occurs when a finger is dragged across the screen TouchEvent The event occurs when a finger is placed on a touch screen TouchEvent The event occurs when a CSS transition has completed TransitionEvent The event occurs once a page has unloaded (for <body>) UiEvent, Event volumechange The event occurs when the volume of the media has changed (includes setting the volume to "mute") waiting The event occurs when the media has paused but is expected to resume (like when the media pauses to buffer more data) wheel The event occurs when the mouse wheel rolls up or down over an WheelEvent</body>	<u>timeupdate</u>	· · · · · · · · · · · · · · · · · · ·	<u>Event</u>
touchend The event occurs when a finger is removed from a touch screen TouchEvent The event occurs when a finger is dragged across the screen TouchEvent The event occurs when a finger is placed on a touch screen TouchEvent The event occurs when a CSS transition has completed TransitionEvent Unload The event occurs once a page has unloaded (for <body>) UiEvent, Event The event occurs when the volume of the media has changed (includes setting the volume to "mute") Waiting The event occurs when the media has paused but is expected to resume (like when the media pauses to buffer more data) Wheel The event occurs when the mouse wheel rolls up or down over an WheelEvent</body>	toggle	The event occurs when the user opens or closes the <details> element</details>	Event
touchmove The event occurs when a finger is dragged across the screen TouchEvent The event occurs when a finger is placed on a touch screen TouchEvent The event occurs when a CSS transition has completed TransitionEvent unload The event occurs once a page has unloaded (for <body>) Volumechange The event occurs when the volume of the media has changed (includes setting the volume to "mute") Waiting The event occurs when the media has paused but is expected to resume (like when the media pauses to buffer more data) Wheel The event occurs when the mouse wheel rolls up or down over an WheelEvent</body>	touchcancel	The event occurs when the touch is interrupted	<u>TouchEvent</u>
touchstart The event occurs when a finger is placed on a touch screen TouchEvent transitionend The event occurs when a CSS transition has completed TransitionEvent unload The event occurs once a page has unloaded (for <body>) Volumechange The event occurs when the volume of the media has changed (includes setting the volume to "mute") waiting The event occurs when the media has paused but is expected to resume (like when the media pauses to buffer more data) Wheel The event occurs when the mouse wheel rolls up or down over an WheelEvent</body>	touchend	The event occurs when a finger is removed from a touch screen	<u>TouchEvent</u>
transitionend The event occurs when a CSS transition has completed Unload The event occurs once a page has unloaded (for <body>) UiEvent, Event Volumechange The event occurs when the volume of the media has changed (includes setting the volume to "mute") Waiting The event occurs when the media has paused but is expected to resume (like when the media pauses to buffer more data) Wheel The event occurs when the mouse wheel rolls up or down over an WheelEvent</body>	touchmove	The event occurs when a finger is dragged across the screen	<u>TouchEvent</u>
unload The event occurs once a page has unloaded (for <body>) UiEvent, Event volumechange The event occurs when the volume of the media has changed (includes setting the volume to "mute") Event waiting The event occurs when the media has paused but is expected to resume (like when the media pauses to buffer more data) Event wheel The event occurs when the mouse wheel rolls up or down over an WheelEvent</body>	touchstart	The event occurs when a finger is placed on a touch screen	<u>TouchEvent</u>
volumechange The event occurs when the volume of the media has changed (includes setting the volume to "mute") waiting The event occurs when the media has paused but is expected to resume (like when the media pauses to buffer more data) wheel The event occurs when the mouse wheel rolls up or down over an WheelEvent	transitionend	The event occurs when a CSS transition has completed	<u>TransitionEvent</u>
setting the volume to "mute") Waiting The event occurs when the media has paused but is expected to resume (like when the media pauses to buffer more data) Wheel The event occurs when the mouse wheel rolls up or down over an WheelEvent	unload	The event occurs once a page has unloaded (for <body>)</body>	<u>UiEvent</u> , <u>Event</u>
(like when the media pauses to buffer more data) wheel The event occurs when the mouse wheel rolls up or down over an WheelEvent	volumechange	· · · · · · · · · · · · · · · · · · ·	Event
<u> </u>	waiting	· · · · · · · · · · · · · · · · · · ·	<u>Event</u>
	wheel	•	WheelEvent

Objeto Event

Property/Method	Description
<u>bubbles</u>	Returns whether or not a specific event is a bubbling event
<u>cancelBubble</u>	Sets or returns whether the event should propagate up the hierarchy or not
<u>cancelable</u>	Returns whether or not an event can have its default action prevented
<pre>createEvent()</pre>	Creates a new event
composedPath()	Returns the event's path
<u>currentTarget</u>	Returns the element whose event listeners triggered the event
<u>defaultPrevented</u>	Returns whether or not the preventDefault() method was called for the event
<u>eventPhase</u>	Returns which phase of the event flow is currently being evaluated
<u>isTrusted</u>	Returns whether or not an event is trusted
<pre>preventDefault()</pre>	Cancels the event if it is cancelable, meaning that the default action that belongs to the event will not occur
stopImmediatePropagation()	Prevents other listeners of the same event from being called
stopPropagation()	Prevents further propagation of an event during event flow
target	Returns the element that triggered the event
timeStamp	Returns the time (in milliseconds relative to the epoch) at which the event was created
type	Returns the name of the event
